

## **1. Personal Recipe Manager**

This app will be designed to help users store, manage, and share their culinary creations. Users can easily add new recipes, categorize them by meal type (breakfast, lunch, dinner), and leave comments or ratings. Possible API to fetch recipes and nutritional information/value are **Edamam or Spoonacular**.

## **2. Fitness Tracker**

This app allows a user to monitor their fitness by tracking workouts, steps, and calories burned. APIs such as **Fitbit or Strava**, will allow the users to log their activities and view their progress over time.

## **3. Time Management**

This app allows users to organize and optimize their daily tasks. Possible APIs I intend to use are **Google Calendar, Todoist, and Trello**. Users can create, organize, and prioritize tasks while tracking their time spent on the activities.
